

Modernizing a Global Manufacturing Solution

Client Success Story

Industry

Production

Client

A global production leader

Challenge

- **Uncontrolled expansion:** The client developed a solution to monitor access to aseptic areas in their manufacturing suites. As the solution expanded to multiple locations, it became unmanageable due to site-specific implementations and outdated technology.
- **Integration difficulties:** The customer wanted to expand the functionality of the system and integrate with additional systems but could not achieve these goals within the current solution framework.

Solution

- **Comprehensive Assessment:** Conducted an end-to-end assessment to understand user challenges, site-specific implementations, and help define long-term product strategy.
- **Modern Technology Stack:** Implemented a modern technology stack tailored to the client's technology expertise and needs.
- **Recommendations and Modernization:** Provided recommendations and modernized the end-to-end solution to ensure scalability and ease of integration.

Benefits

- **Expanded functionality:** The final product extended the functionality of the original solution to more than four manufacturing sites.
- **Network expansion:** Enabled the customer to successfully extend the solution across the site network.
